Version	Date	Comment
UTM2.6.0.26	15 February 2021	Version 2.6.0.26 GA Release

Build Information

Build 2.6.0.26 version released on 15 February 2021

Seqrite UTM GA Build 2.6.0.26 details:

Product Name	Release Date	MD5 Checksum	Build Version
Seqrite Unified Threat Management	15 Feb 2021	da0f7d22ceec91c8ecb069eee4c34048	Build 2.6.0.26

New Features and Enhancements

New Features with UTM 2.6:

- Single Sign-On (SSO):
    SSO allows the users to automatically log in to the UTM as soon as they login to their domain machines and hence reduces the requirement of multiple login.
- SFP port:
    SFP module support is perquisite for most of RFP and Govt tenders to qualify Seqrite UTM.
- Scalability:
Significant increase of scalability across all models specially high end model (Refer to UTM Sizing Guide).
- DNS filtering
    The feature provides businesses an additional layer of protection and prevents employees from visiting websites known to be used for malicious purposes.
    To enforce acceptable Internet usage policies and block access to illegal website content, websites containing content unsuitable for the workplace and categories of sites that are a major drain on productivity.
- Enhanced AV update
    Differential AV update reduces the overall size of the update resulting in faster updates and enhanced handling of error situations.
- Strong Application control
    Enhanced signature based application control using the new engine that removes the limitations of legacy application control

NOTE: Please check Help section on the UTM for more details for the new features.

Bug Fixes

ID#	Summary of the fixed issue
1	MAC Wise Users are Unable to access HTTP websites
2	Unable to Schedule Auto Firmware Upgrade for UTM
3	Unable to get DHCP IP on UTM WAN Interface after adding USB tethering device JIO USB modem (JMR540)
4	Both the Primary and Backup VPN Tunnel should not be Active simultaneously.
5	IPsec Logs are not generating intermittently.
6	Users are not getting session/auto logout, if they are in idle state

Known Issues

The following table lists some of the important known issues to consider in version 2.6.0.26

ID#	Summary of known issue
1	Ipsec site to site VPN tunnel remains still active even after editing RSA public key incorrectly at server end. Work Around: Use only valid format of RSA keys
2	SSO AD Agent Service does not start on Windows Server 2019 showing error as DLL files missing. Work Around: Install vc_redist.x64 and start the service. Refer:https://blog.pcrisk.com/windows/12278-how-to-fix-the-program-cant-start-because-msvcp140dll-is-missing-from-your-computer-error
3	DHCP IP address assigned to SFP Ethernet is removed after disabling interface, DHCP address not received on swappable Ethernet. Work Around: Make sure the Interface configurations are valid while adding or removing the SFP NIC. Reconfiguration of Interface or Rebooting of device will solve the issue.

Appendix

Installation of UTM version 2.6.0.26

- ## Using ISO
  Standard ISO installation procedure

- ## Firmware upgrade functionality
  Important: Firmware upgrade is a critical operation that affects the software of the UTM device. Please backup your configuration, critical logs and reports before proceeding with firmware upgrade.

  To apply 2.6, Admin must manually download and Install the upgrade via System->Firmware Upgrade option.

  Following are steps to install 2.6 firmware online:

  1. Login to the UI and navigate to the path System -> Firmware Upgrade
  2. Under Firmware List, under Actions column, Choose the option 'Download & Install' to install the firmware immediately.

  NOTE:
  If the UTM devices are on 2.5.1.10, then Admin must apply update to bring it to 2.5.2.1 version first; so that upgrade to UTM 2.6 could be done.

Help and Support Information

For more details on how to use the features and other relevant information, refer to the Help section of Seqrite UTM. For additional technical support, consult the Seqrite UTM technical support center.
